HOW TO USE THIS TEMPLATE

Open the Layers panel (Window->Layers).

There is a layer for the front of the mount and one for the back. Depending on which side of the mount you want branded, ensure it is turned on and the other turned off (eye symbol denotes layer is visible).

We have created a number of designs to choose from. Simply turn on and off visibility of each layer to see which one you like. Then simply edit the text. You can change fonts and sizes if you wish.

When you are happy with your design, duplicate the layer and call it My Design. Select the text on this layer, right click and select Create Outlines.
